Existing information on Residency Interview or the Selection Process is scattered. There is a huge deficiency in the current market on the subject of interview preparation as well as detailed choice of specialties based on the local climate. This book provides a step-by-step, practical, easy to understand guide to help readers select their medical specialties, prepare their CVs and excel in interviews. So you want to be a Doctor? It is a practical, how-to guide about becoming a medical doctor from an insider's perspective. It addresses all the stories needed to succeed as a medical school candidate, and then goes a step further than any other admissions guide on the market today to provide a glimpse of life as a medical student and intern through real-world experiences. It provides a thorough explanation of the different medical fields, and explores issues such as lifestyle, salary, and competition for residency and fellowship positions for each specialty. It outlines options for nontraditional students seeking a medical career, namely older candidates, ethnic minorities, economically disadvantaged students, and members of the armed forces. It also includes a section on Canadian training, the alternative to US medical schools. The celebrity cosmetic surgery blogger describes his misfit youth as a nerdy Korean-American student with a misshapen jaw whose life-changing surgery led him to become a successful plastic surgeon. Students and doctors in medical school are writing in increasing numbers of students with disabilities entering their programs. Concurrently, the benefits of diversity in healthcare are becoming increasingly apparent and important. A commitment to disability inclusion for qualified students should be a high-level goal of nursing, medical, and other health science programs. To support this goal, leaders in these areas must develop robust programs and an understanding of the needs of qualified students with disabilities in the health sciences and programs. This book of case studies is the perfect companion to M eeks' and Neal-Boylan's recently-published book Disability as Diversity. It contains ten cases related to medicine and nursing but with significant relevance for all health professions. Each case is preceded by an introduction and a call to action for resource professional viewpoints. The cases are then deconstructed with reference to the book Disability as Diversity, relevant citations from the literature and case law. Developed by some of the most notable researchers and clinicians in the field this book comes as a truly invaluable resource for deans, program directors, faculty and student affairs personnel. Offices can use these cases as a platform for critical discussion and training about disability processes, policies and decision-making regarding accommodations and inclusion. Residency is a defining period in a physician's life because it is the decisive stage for personal growth, intellectual challenge and emotional stress. It is a major transitional period transforming a medical student into a practice-ready physician. This role-change for the physician-in-training usually takes place in a new setting and necessitates dealing with conflicting demands, heavy responsibility and long work hours. Aiding to the residents' burden is the ongoing need to manage their financial, social and work demands.
