This book gathers the proceedings of the 5th International Conference on the Industry 4.0 Model for Advanced Manufacturing (AMP 2020), held in Belgrade, Serbia, on 1–4 June 2020. The event marks the latest in a series of high-level
conferences that bring together experts from academia and industry to exchange knowledge, ideas, experiences, research findings, and information in the field of manufacturing. The book addresses a wide range of topics, including: design of smart and intelligent products, developments in CAD/CAM technologies, rapid prototyping and reverse engineering, multistage manufacturing processes, manufacturing automation in the Industry 4.0 model, cloud-based products, and cyber-physical and reconfigurable manufacturing systems. By providing updates on key issues and highlighting recent advances in manufacturing engineering and technologies, the book supports the transfer of vital knowledge to the next generation of academics and practitioners. Further, it will appeal to anyone working or conducting research in this rapidly evolving field.

Considered the gold-standard reference on information security, the Information Security Management Handbook provides an authoritative compilation of the fundamental knowledge, skills, techniques, and tools required of today’s IT security professional. Now in its sixth edition, this 3200 page, 4 volume stand-alone reference is organized under the CISSP Common Body of Knowledge domains and has been updated yearly. Each annual update, the latest is Volume 6, reflects the changes to the CBK in response to new laws and evolving technology.

This text definitively breaks down each component of the Eco-Management and Audit Scheme regulation (EMAS) – even its appendices and EU guidance documents - providing a step-by-step analysis of the Scheme. In addition, the work offers case examples of three of Akzo Nobel manufacturing locations which have been registered to EMAS, providing real-world advice on how to meet the requirements of the Scheme.

Regulation of Securities: SEC Answer Book, Fifth Edition is your complete guide to understanding and complying with the day-to-day requirements of the federal securities laws that affect all public companies. Using a question-and-answer format similar to that which the SEC has embraced, this valuable desk reference provides concise, understandable answers to the most frequently asked compliance questions, and ready access to key statutes, regulations, and court decisions. Designed for both beginners and seasoned professionals, the volume contains approximately 1,400 pages organized in 23 self-contained chapters. Each chapter covers the basics before moving into the nuanced details, meeting the needs of those who seek a general understanding of a topic as well as those grappling directly with critical issues. Twice-yearly supplements keep the book current in this rapidly evolving field. Whether you are a lawyer, accountant, corporate executive, director or investor, you'll be able to quickly find concise answers to essential questions about the Dodd-Frank Act, Exchange Act registration and reporting, executive compensation disclosure, derivatives disclosure, management’s discussion and analysis, audit committee responsibilities, Sarbanes-Oxley, electronic filing, interactive financial data, tender offers, proxy solicitations, insider trading, going private transactions, shareholders’

Tax Planning for International Mergers, Acquisitions, Joint Ventures and Restructurings Fifth Edition Edited by Peter H. Blessing and Ansgar A. Simon
About the editors: Peter H. Blessing is Associate Chief Counsel, International, at the Office of Chief Counsel of the Internal Revenue Service. Before his appointment in April 2019, he was the head of cross-border corporate transactions in KPMG’s Washington National Tax group. He is a member of Washington National Tax practice of KPMG LLP. His practice involves transactional, advisory and controversy matters, generally in a cross-border context. Peter obtained his LL.M. Taxation from New York University School of Law and has also earned degrees from Princeton University and Columbia Law School. Ansgar A. Simon heads the transactional tax practice of Covington & Burling LLP in New York. His broad-based transactional tax practice covers mergers and acquisitions, corporate restructuring transactions, divestitures, spin-offs, and joint ventures, as well as the financing of such transactions, generally in a cross-border context. Ansgar received his degree in law from Stanford Law School and a PhD in philosophy from the University of California, Los Angeles. About the book: Tax Planning for International Mergers, Acquisitions, Joint Ventures and Restructurings is a practical overview of key tax aspects of international transactions that have general applications, followed by twenty detailed country profiles. Transactional tax planning always is of critical importance to sound deal making. In the international arena, cross-border mergers and acquisitions continue to proliferate as companies seek to maximize global market opportunities. Whether the transaction be strategic or opportunistic, transformational or conventional expansion, third party or internal value-enhancing restructuring, it is crucial for management and counsel to develop a working knowledge of the salient features of the relevant tax law in a broad range of global jurisdictions. This book, now in its fifth edition, distils knowledge of the tax aspects involved in such transactions across international borders. What's in this book: This book considers each jurisdiction’s handling of areas of concern in international tax planning such as: – entity classification; – structuring taxable transactions; – structuring tax-free transactions (both in domestic and cross-border transactions); – loss planning; – IP planning; – compensation arrangements; – acquisition financing; – joint venture planning; – value added tax issues; and – tax treaty usage. The experts in each country suggest solutions designed to maximize effective tax planning and satisfy compliance obligations. How this will help you: This user-friendly work assists in planning and evaluating strategies for transactions, both nationally and internationally, in single and multiple jurisdictions, as well as in implementing them. This book further allows an easy comparison of key tax aspects in major jurisdictions, thereby providing not only an easy
understanding of the key structuring points in context but also critical issue-spotting as well as highlighting potential value-enhancing strategies. Addressing an important information gap in an area of widespread commercial concern, this resource helps international tax counsel, corporate and financial services attorneys, and corporate planning and compliance professionals to confidently approach challenging situations in both national and international regime. Editors: Peter H. Blessing and Ansgar A. Simon

Evaluation has come of age. Today most social and political observers would have difficulty imagining a society where evaluation is not a fixture of daily life, from individual programs to local authorities to parliamentary committees. While university researchers, grant makers and public servants may think there are too many types of evaluation, rankings and reviews, evaluation is nonetheless viewed positively by the public. It is perceived as a tool for improvement and evaluators are seen as dedicated to using their knowledge for the benefit of society. The book examines the degree to which evaluators seek power for their own interests. This perspective is based on a simple assumption: If you are in possession of an asset that can give you power, why not use it for your own interests? Can we really trust evaluation to be a force for the good? To what degree can we talk about self-interest in evaluation, and is this self-interest something that contradicts other interests such as "the benefit of society?" Such questions and others are addressed in this brilliant, innovative, international collection of pioneering contributions.

Digital Enterprise Technology (DET) is more than a concept. Companies are facing new challenges in a context where the references are mostly numerical. Nowadays, digital methods and tools are widely generalized. DET 2008 allowed excellent exchanges about "the collection of systems and methods for the digital modelling and analysis of the global product development and realisation process, in the context of lifecycle management". This book of proceedings gives a short vices of the keynotes and proposes the text of the papers that have been presented during DET 2008. This gives a clear view of the actual state of the art and of the industrial needs. This book of proceedings is organized with respect to the topics that were addressed during the conference.

Interest in generally expanding the understanding of small and medium-sized enterprises, especially understanding their strategies and operations to enter international markets, is growing rapidly among researchers and academics globally. Government officials, regional and economic specialists, and international trade advisers are directly involved in assisting small and medium-sized enterprises in developing their international marketing expertise. Motivating SMEs to Cooperate and Internationalize consists of research studies, cases, and experiences obtained by researchers and academics from managers of small and
medium-sized enterprises in Northern Europe as they worked closely with managers on issues and problems leading to internationalization of enterprises. This book will map not only the attempts of small and medium-sized enterprises in Northern Europe to enter foreign markets, but also to understand how researchers and academics can help small and medium-sized Northern European enterprises achieve their objectives. This compilation of approaches, perspectives, and experiences will serve as a resource tool for researchers and academics active in international management training programs worldwide and help illustrate how to close the gap between publishing results of their findings and efforts to disseminate their findings among managers of small and medium-sized enterprises in their domains. This book is the first attempt to integrate results of research studies and practices as an illustration of how knowledge of small and medium-sized enterprises has evolved since the 1980s with the contributions of individual researchers and academics in Northern Europe. It will be of relevance to academics and researchers interested in working closely with small and medium-sized enterprises to meet their goals in entering international markets.

Rapid technological advancement has given rise to new ethical dilemmas and security threats, while the development of appropriate ethical codes and security measures fail to keep pace, which makes the education of computer users and professionals crucial. The Encyclopedia of Information Ethics and Security is an original, comprehensive reference source on ethical and security issues relating to the latest technologies. Covering a wide range of themes, this valuable reference tool includes topics such as computer crime, information warfare, privacy, surveillance, intellectual property and education. This encyclopedia is a useful tool for students, academics, and professionals.

This volume presents the 5th European Conference of the International Federation for Medical and Biological Engineering (EMBEC), held in Budapest, 14-18 September, 2011. The scientific discussion on the conference and in this conference proceedings include the following issues: - Signal & Image Processing - ICT - Clinical Engineering and Applications - Biomechanics and Fluid Biomechanics - Biomaterials and Tissue Repair - Innovations and Nanotechnology - Modeling and Simulation - Education and Professional

The 5th International Asia Conference on Industrial Engineering and Management Innovation is sponsored by the Chinese Industrial Engineering Institution and organized by Xi’an Jiaotong University. The conference aims to share and disseminate information on the most recent and relevant researches, theories and practices in industrial and system engineering to promote their development and
The food industry faces an unprecedented level of scrutiny. Consumers are not only concerned with the safety and quality of food products but also the way in which they are produced. At the same time the food industry has developed new ways of assuring appropriate standards for its products and their methods of production, developing systems such as TQM and HACCP to identify and manage key steps in production. These new methods require new skills in auditing. Auditing in the food industry provides an authoritative guide to the range of standards and the auditing skills they demand. Part one sets the scene with an introductory chapter reviewing developments in standards affecting the food industry. There then follows chapters on how retailers audit their suppliers and how governments have moved from a traditional inspection role to one of ‘regulatory verification’ with its emphasis on auditing the robustness of a business’s own systems for managing safety and quality. Part two examines the key aspects of safety and quality. A first chapter reviews the ways retailers assess supplier HACCP systems. There is then a chapter reviewing TQM systems that provides a context for a discussion of auditing techniques for HACCP-based quality systems. A final chapter looks at standards governing the analytical methods used in safety and quality control. Part three considers newer standards that are becoming increasingly important in the food industry. There are chapters on benchmarking an organisation against others as a way of improving performance, auditing the impact of food processing operations on the environment and auditing organic food processing. Auditing in the food industry is a valuable guide to the range of standards facing the food industry and the ways it can audit, and thus improve the quality of its performance.
Qualitative research, once on the fringes, now plays a central part in advancing nursing and midwifery knowledge, contributing to the development of the evidence base for healthcare practice. Divided into four parts, this authoritative handbook contains over forty chapters on the state of the art and science of qualitative research in nursing. The first part begins by addressing the significance of qualitative inquiry to the development of nursing knowledge, and then goes on to explore in depth programs of qualitative nursing research. The second section focuses on a wide range of core qualitative methods, from descriptive phenomenology, through to formal grounded theory and to ethnography, and narrative research. The third section highlights key issues and controversies in contemporary qualitative nursing research, including discussion of ethical and political issues, evidence-based practice and Internet research. The final section takes a unique look at qualitative nursing research as it is practiced throughout the world with chapters on countries and regions from the UK and Europe, North America, Australasia, Latin America, to Japan, China, and Korea. With an international selection of established scholars contributing, this is an essential overview and will help to propel qualitative research in nursing well into the twenty-first century. It is an invaluable reference for all nursing researchers.

The most important and recent judgments of the CJEU Considering the ever increasing importance of indirect taxation as a source of revenue for governments, the intensifying complexity of the legal framework, and the proliferating number of countries adopting indirect taxation, it is essential to scrutinize how the law is actually applied in practice. The primary driving force in this area is, undoubtedly, the Court of Justice of the European Union. This book analyses selected topics (e.g. fundamental principles and VAT, administrative cooperation in VAT, taxable base and rates, exemptions, and deductions) by examining the most prominent and recent judgments of the Court of Justice of the European Union. Experts from all over the world, not just from academia but also government representatives and tax practitioners, have provided their input and helped us compile what is an informative and worthy read for anyone dealing with indirect taxation on a professional basis.

Charged with ensuring the confidentiality, integrity, availability, and delivery of all forms of an entity's information, Information Assurance (IA) professionals require a fundamental understanding of a wide range of specializations, including digital forensics, fraud examination, systems engineering, security risk management, privacy, and compliance. Establishing this understanding and keeping it up to date requires a resource with coverage as diverse as the field it covers. Filling this need, the Encyclopedia of Information Assurance presents an up-to-date collection of peer-reviewed articles and references written by authorities in their fields. From risk management and privacy to auditing and compliance, the encyclopedia’s four volumes provide comprehensive coverage of the key topics related to information assurance.
assurance. This complete IA resource: Supplies the understanding needed to help prevent the misuse of sensitive information Explains how to maintain the integrity of critical systems Details effective tools, techniques, and methods for protecting personal and corporate data against the latest threats Provides valuable examples, case studies, and discussions on how to address common and emerging IA challenges Placing the wisdom of leading researchers and practitioners at your fingertips, this authoritative reference provides the knowledge and insight needed to avoid common pitfalls and stay one step ahead of evolving threats. Also Available Online This Taylor & Francis encyclopedia is also available through online subscription, offering a variety of extra benefits for researchers, students, and librarians, including: Citation tracking and alerts Active reference linking Saved searches and marked lists HTML and PDF format options Contact Taylor and Francis for more information or to inquire about subscription options and print/online combination packages. This book, first published in 1986, collects together the papers presented at the Fifth International Congress on Accounting in 1938. Cutting edge research at the time, these analyses now form an integral part of the history of accounting.

This study adds both knowledge and method in the writing of business history. The author proposes that a preliminary management audit can be devised and utilized to gather data, analyse and compare longitudinally the quality of management existing in organizations. This book modifies a methodological tool for measuring, analysing and comparing managements to aid in the writing of business history. It establishes criteria and examples of excellent management from a sample of the USA’s first large-scale organization – the railroads. Prior to the 1870s the railroads were the only big business in the USA and the early ones emerged as a managerial problem which made obsolescent traditional structures and concepts and required effective management.

The Annual (ICGS) International Conference is an established platform in which se-
representatives, chief executives, security professionals, and research scientists from the United Kingdom and from around the globe. The 2009 two-day conference focused on the challenges of complexity, rapid pace of change and risk/opportunity issues associated with modern products, systems, social events and infrastructures. The importance of adopting systematic and systemic approaches to the assurance of these systems was emphasized within a special stream focused on strategic frameworks, architectures and human factors. The conference provided an opportunity for systems scientists, assurance researchers, owners, operators and maintainers of large, complex and advanced systems and infrastructures to update their knowledge with the state of best practice in these challenging domains while networking with the leading researchers and solution providers. ICGS3 2009 received paper submissions from more than 20 different countries around the world. Only 28 papers were selected and were presented as full papers. The program also included three keynote lectures by leading researchers, security professionals and government representatives. June 2009 Hamid Jahankhani Ali Hessami Feng Hsu

This book presents high-quality original contributions on new software engineering models, approaches, methods, and tools and their evaluation in the context of defence and security applications. In addition, important business and economic aspects are discussed, with a particular focus on cost/benefit analysis, new business models, organizational evolution, and business intelligence systems. The contents are based on presentations delivered at SEDA 2016, the 5th International Conference in Software Engineering for Defence Applications, which was held in Rome, Italy, in May 2016. This conference series represents a targeted response to the growing need for research that reports and debates the practical implications of software engineering within the defence environment and also for software performance evaluation in real settings through controlled experiments as well as case and field studies. The book will appeal to all with an interest in modeling, managing, and implementing defence-related software development products and processes in a structured and supportable way.

Due to the developments in the role of governments, the importance of government accounting and financial reporting is increasing. This led to changes in Government Accounting all over the world. For institutional, public finance and other reasons this has not always been done for central governments and regional and local governments in the same way. Some countries maintain the cash basis, some changed over to the accrual basis. Many of them started at first with lower government levels, only few changed over completely. Comparative Issues in Government and Accounting aims to give insight in the array of different patterns the world shows with respect to government accounting and financial reporting. Of course a complete overview would have been too ambitious a goal. This book brings together an interesting number of academics coming from a representative
number of countries to get an impression of the situation and especially of the existence and the backgrounds of similarities and differences. Thirty-five authors and co-authors produced 21 chapters reflecting on the situations in 16 countries on 4 continents. Countries dealt with are Albania, Australia, Belgium, China, Egypt, Finland, France, Japan, The Netherlands, New Zealand, Norway, Poland, Russia, Spain, the United Kingdom and the United States.

'It is time, 15 years on from the coining of the "Audit Explosion", to re-appraise the growth of new forms of auditing. As we move into what might be called "Auditing in Austerity" this book gives us that overview. An extremely well-informed team of authors has been assembled to deliver a comparative analysis that successfully mixes "insider" and "outsider" perspectives. This should be required reading, not just for auditors and their academic hangers-on, but for the wider audience of those interested in contemporary developments in democratic accountability and policymaking.' – Christopher Pollitt, Catholic University of Leuven, Belgium

'This book fills an important gap in the market. At a time when governments around the world face the largest deficits in decades, there is a strong need to reduce public expenditures whilst ensuring greater value for money from public services. This book addresses these concerns and many more. Each of the chapter authors is a senior practitioner and/or an academic who specialises in performance auditing and accountability in modern complex democracies. They explore the nature of the concepts which underlie current practice; set out a variety of institutional structures and processes, and identify the limits of both theory and practice. These make this a book of considerable significance and one which makes an important contribution to our understanding of the democratic process. This is not a narrowly-focused book only of interest to those who specialise in performance auditing. Given the richness of its analysis and the fine-grained understanding of institutions and processes, it has much to say to students of public administration, management and policy analysis. I am confident that this will rapidly become the standard reference for those who are interested in performance auditing.' – Peter M. Jackson AcSS, University of Leicester, UK

'What a good read. Insightful and challenging. It is likely to incite a lot of discussion on the wide-ranging views from the very well-informed and qualified contributors, not least from those who actually have to implement the findings and recommendations of performance audit reports. The focus is rightly on accountability for performance not only in achieving government program objectives in an economic, efficient and effective manner, but also on the audit institutions themselves. It should be welcomed by the public sector and particularly by the parliamentary institutions concerned with achieving accountability for government performance.' – Pat Barrett AO, Australian National University and former Australian Auditor-General (1995–2005)

'This book is a much welcome tonic for public administration. It is one of the few books that explicitly focus on how audit institutions carry out their performance auditing responsibilities. While auditors will likely read this, the authors have geared the book to a broader readership, including public managers who are often the subject of performance audits.' – From the foreword by Paul Posner, George Mason University, US
A state-of-the-art book examines the development of performance audit, drawing on the experience in a number of different countries, including the United Kingdom, the United States, Australia, the Netherlands, and Belgium. The expert contributors identify the trajectory of performance audit, examine how it is conducted and consider what it is contributing to effective government. They conclude that, in the face of new challenges, performance auditors should focus both on their core responsibilities to ensure accountability, and continue to develop more insightful and sophisticated approaches to enable them to assess the growing complexity of the delivery of public services. By doing so, they can continue to play a valuable role in democratic accountability. Providing an up-to-date overview and discussion of performance audit, this highly topical book will appeal to all those working within audit, academics working in the fields of public management and public administration, as well practitioners in and close to state audit institutions. Members of Parliament, evaluators, internal auditors, researchers, policy analysts and consultants will also find this book invaluable.

The growth in the Bioinformatics and Computational Biology fields over the last few years has been remarkable and the trend is to increase its pace. In fact, the need for computational techniques that can efficiently handle the huge amounts of data produced by the new experimental techniques in Biology is still increasing driven by new advances in Next Generation Sequencing, several types of the so called omics data and image acquisition, just to name a few. The analysis of the datasets and its integration call for new algorithms and approaches from fields such as Databases, Statistics, Data Mining, Machine Learning, Optimization, Computer Science and Artificial Intelligence. Within this scenario of increasing data availability, Systems Biology has also been emerging as an alternative to the reductionist view that dominated biological research in the last decades. Indeed, Biology is more and more a science of information requiring tools from the computational sciences. In the last few years, we have seen the surge of a new generation of interdisciplinary scientists that have a strong background in the biological and computational sciences. In this context, the interaction of researchers from different scientific fields is, more than ever, of foremost importance boosting the research efforts in the field and contributing to the education of a new generation of Bioinformatics scientists. PACBB’11 hopes to contribute to this effort promoting this fruitful interaction. PACBB’11 technical program included 50 papers from a submission pool of 78 papers spanning many different sub-fields in Bioinformatics and Computational Biology. Therefore, the conference will certainly have promoted the interaction of scientists from diverse research groups and with a distinct background (computer scientists, mathematicians, biologists). The scientific content will certainly be challenging and will promote the improvement of the work that is being developed by each of the participants.

Forum selection is typically the most crucial issue in a transnational case. Nowhere is this truer than in maritime law, where forum selection is the first and sometimes
the only point of engagement in international maritime litigation. In this important collection of essays, ten outstanding maritime law scholars from eight countries analyze the complex theoretical and practical issues surrounding forum selection in maritime cases. Among the topics discussed are the following: injunctions; forum shopping for limitation of liability; forum non conveniens; effect of forum selection clauses; loss or damage to goods; the in personam link; and, recognition of foreign liens. The book stems from a symposium held at Tulane University in 2004 to honor the 70th birthday of Robert Force, the influential and respected scholar who founded the renowned Tulane Maritime Law Center. As befits such a festschrift, the book opens with a detailed analysis and overview of forum selection clauses, written by Professor Force and his Tulane colleague Martin Davies. This is followed by thought-provoking essays on comparative issues, procedural theory, competing jurisdictions, jurisdictional clauses, EC law, and other matters, and by insightful and knowledgeable reports on specific issues related to China and South Africa. At a moment in history when geopolitical trends and globalization of trade are rapidly growing and changing, maritime lawyers and the various agencies and commissions that sustain this vitally important branch of international legal practice will greatly appreciate this remarkable book.

The annual International Conference on Global Security, Safety and Sustainability (ICGS3) is an established platform in which security, safety and sustainability issues can be examined from several global perspectives through dialogue between academics, students, government representatives, chief executives, security professionals, and research scientists from the United Kingdom and from around the globe. The three-day conference focused on the challenges of complexity, rapid pace of change and risk/opportunity issues associated with modern products, systems, special events and infrastructures. The importance of adopting systematic and systemic approaches to the assurance of these systems was emphasized within a special stream focused on strategic frameworks, architectures and human factors. The conference provided an opportunity for systems scientists, assurance researchers, owners, operators and maintainers of large, complex and advanced systems and infrastructures to update their knowledge on the state of best practice in these challenging domains while networking with the leading researchers and solution providers. ICGS3 2010 received paper submissions from more than 17 different countries in all continents. Only 31 papers were selected and were presented as full papers. The program also included a number of keynote lectures by leading researchers, security professionals and government representatives.

This book mainly focuses on cloud security and high performance computing for cloud auditing. The book discusses emerging challenges and techniques developed for high performance semantic cloud auditing, and presents the state of the art in cloud auditing, computing and security techniques with focus on technical aspects and feasibility of auditing issues in federated cloud computing environments. In summer 2011, the United States Air Force Research Laboratory
(AFRL) CyberBAT Cloud Security and Auditing Team initiated the exploration of the cloud security challenges and future cloud auditing research directions that are covered in this book. This work was supported by the United States government funds from the Air Force Office of Scientific Research (AFOSR), the AFOSR Summer Faculty Fellowship Program (SFFP), the Air Force Research Laboratory (AFRL) Visiting Faculty Research Program (VFRP), the National Science Foundation (NSF) and the National Institute of Health (NIH). All chapters were partially supported by the AFOSR Information Operations and Security Program extramural and intramural funds (AFOSR/RSL Program Manager: Dr. Robert Herklotz). Key Features: · Contains surveys of cyber threats and security issues in cloud computing and presents secure cloud architectures · Presents in-depth cloud auditing techniques, federated cloud security architectures, cloud access control models, and access assured information sharing technologies · Outlines a wide range of challenges and provides solutions to manage and control very large and complex data sets.

Standards, technologies, and requirements for computer validation have changed dramatically in recent years, and so have the interpretation of the standards and the understanding of the processes involved. International IT Regulations and Compliance brings together current thinking on the implementation of standards and regulations in relation to IT for a wide variety of industries. The book provides professionals in pharmaceutical and semiconductor industries with an updated overview of requirements for handling IT systems according to various Quality Standards and how to ?translate? these requirements in the regulations.

Current modern companies, which are also the key factors of a global economy, are subject to increasing pressures to conduct their business in an environmentally responsible manner, due to social and environmental problems. Improving long-term environmental performance can bring economic benefits to those companies that are innovative and environmentally sensitive, especially by integrating environmental information into their business strategies. Considering all the changes, sustainability reporting, management, and financial accounting becomes a powerful information tool for executives, managers, and employee teams to gain insights and make better decisions. Along with concepts such as ethical, controlling, auditing, management, and financial accounting, reporting provides value with the decision-making process. All these debates underline the major responsibility of users when configuring accounting and finance models and thereby in modelling business information. Sustainability Reporting, Ethics, and Strategic Management Strategies for Modern Organizations proposes an interdisciplinary perspective and explores various theoretical and practical approaches of ethical standards, management accounting, and their impact in the 21st century on different areas of activity. It contrasts external financial accounting for government regulators and the investment community with internal management accounting for managers to leverage for decision making. In addition, the book
examines the role of management accounting and sustainability reporting from other points of view such as ethical standards, corporate social responsibility, creative accounting, green accounting, environmental indicators, e-accounting, KPI, lean accounting, controlling, auditing, reporting, etc., offering a number of new insights into management accounting. It is intended for chief financial officers, financial controllers, business analysts, financial planners, financial analysts, budgeting managers, executives, managers, academicians, researchers, and students.
