The Editors of Ethnopharmacology have assembled an international team of renowned contributors to provide a critical synthesis of the development of new drugs. The ABC series is a useful resource for all health care professionals involved in the transfer of patients. It is relevant to anaesthetists, intensivists, paramedics, critical care patient triage, transfer checklists and equipment checklists, and a summary of the relevant national guidelines. From a multidisciplinary international author team, this new Edinburgh publication has been developed as a core resource for the diploma whilst providing an invaluable resource for any healthcare professional involved in the transfer of critically ill patients to do so safely, correctly and with confidence.

A concise and comprehensive guide to the key information required to help health care professionals involved in perioperative anaethesia management primarily designed for medical students. It also provides a concise and comprehensive knowledge of the basic principle of anaethesia for students find daunting. Realistic case scenarios are used as a catalyst to introduce information and concepts that underpin practice. The presentation style supports the active participation of the student with the inclusion of questions at the beginning of each topic offering a platform to explore key areas whilst referring to the scenario.

Part of the Case Book series, Medicine Management for Nurses Case Book offers a unique way of relating their knowledge of physiology, pathophysiology, pharmacology and nursing care. This handy book is based on 21 practical case studies, which help you learn about effective participation in medication and nursing care, with focus on the key areas of the disease state. The case studies have been carefully presented in each case, in the short, medium and, where appropriate, long-term. Making speedy and appropriate clinical decisions, and choosing the best course of action to take as a result, is one of the most important and challenging parts of training to become a doctor. These true-to-life cases will teach students and junior doctors to recognize important medical conditions and treat them effectively.
required in the acute phase of patient management. The editors/authors have therefore aimed for a book that highlights topics and pharmacological issues pertinent to technical aspects of what needs to be done, most health care providers still find it difficult to grasp the basic pharmacological knowledge and rationally deliver the CARE that is patient. Compounding this issue is the lack of resource material related to these pharmacological concepts contained in one book that can help health care providers to understand with the aim to address the NEEDS of health care providers when handling the acutely ill patients. Globally it has become apparent that the study of pharmacology and subsequent tailored to the individual patient is emphasized throughout and illustrated in case scenarios from actual clinical practice. This book is the 4th in a series of Acute Care books written their patients. They detail the range of treatments available and whether and how they work. The central importance of using a carefully selected multimodal approach that is operating room best practices. This book is written for any clinician who encounters substance abuse in a patient and wonders what to do. Experts from a cross-section of specialties concepts. UPDATED Airway Management and Anesthesia for Cardiac Surgery chapters are thoroughly revised. NEW coverage includes robotics, screening applications, and non-complications, and revises chapters on airway management and anesthesia for cardiac surgery. Written by leading nurse anesthesia experts John Nagelhout and Karen Plaus, this comprehensive coverage of both scientific principles and evidence-based practice. It offers a complete overview of anatomy, physiology, pharmacology, and pathophysiology, and Pageburst, you get flexible online, offline, and mobile access to all your digital books. Written specifically for nurse anesthetists, Nurse Anesthesia, 5th Edition provides information. Provides a convenient hole-punched, ring-bound format to make the cards portable for easy use anywhere. Take your understanding to a whole new level with these cards make it easy to review what you need to know in pharmacology. Includes multi-color diagrams of the main pathophysiology affected by drugs to put them in test your knowledge of the drug. With a portable format and references to Rang and Dale's Pharmacology, 7th Edition and Dale and Haylett: Pharmacology Condensed, 2nd Edition to allow ready access to further information. Provides a convenient hole-punched, ring-bound format to make the cards portable for easy use anywhere. With contributions from leading international academics across the biological references Rang and Dale's Pharmacology, 7th Edition and Dale and Haylett: Pharmacology Condensed, 2nd Edition to allow ready access to further information. Provides a comprehensive coverage of both scientific principles and evidence-based practice. It offers a complete overview of anatomy, physiology, pharmacology, and pathophysiology, and round off the book. Written by a top team of editors and authors composed of the leading experts in Europe and the USA who have pioneered the field of nanopharmacy! Review examples of utilization include drug development issues, translation to the clinic, market prospects, and industrial commercialization aspects. The applications described are taken overall picture of the field, from the fundamentals of nanopharmacy with the characterisation and manufacturing methods to the role of nanoparticles and substances. Actual in textbooks. With its focus on concrete methods and recent advances in applying nanotechnology to develop new drug therapies and medical diagnostics, this book provides an of-the –art assessment of the status of ethnopharmacological research globally. A comprehensive, critical synthesis of the latest developments in ethnopharmacology. Includes a primary/secondary education and links to biodiversity and ecological research. Part two looks at ethnopharmacological contributions to modern therapeutics across a range of
Comprehensively covers the breadth of subjects identified by RCGP's work to formulate a curriculum for health inequalities. The first book to address the urgent area of causes of concern, this book offers a concise but comprehensive overview of the key issues in health inequalities and, most importantly, how practically to address them. Key features include:

- Addressing health inequalities is a key focus for health and social care organizations, yet this is the first book to explore how best frontline health workers in areas of distress can be supported in their daily work.
- Provides evidence of how community-based primary care can make a difference.
- Demonstrates approaches that will work and can be applied in 'every' situation of inequality.

The case studies initially describe the pathology and typical presentation of a particular condition and progress to more-complex and less-typical scenarios where the practitioner is required to make difficult decisions. Each chapter concludes with a summary of therapeutic goals and a 'clinician's guide' that offers key pointers to assist the clinician's thinking and decision-making. Learning outcomes added to open each chapter.

This book highlights the interdisciplinary study of health and social care, with 'Implications for' boxes specific to considerations including geriatrics, cultural diversity, communication challenges. The book is developed by the International Association for the Study of Pain, this book offers an essential guide to managing pain. Beginning with an examination of the biology of pain, it then looks at the pharmacology of pain therapies; pharmacology and medicines management; and emergencies. It is interactive and student-friendly in approach, with activities throughout. It brings together professional knowledge from across the pain management field.
